DETAILED ACTION

Response to Amendment

1. Amendment filed on 5/06/2003 has been entered and made of record as Paper No. 6. Claims 12-40 have been canceled. Claims 1-11 are remained for examination in Paper No. 6 is acknowledged.

Priority

2. Acknowledgment is made of applicant's claim for foreign priority base on an application No. 2001-063491 filed in Japan on March 7, 2003.

It is noted that Applicants have filled a certified copy of said application as required by U.S.C 119, which papers have been placed of record in the file.

Information Disclosure Statement

3. Information Disclosure Statement (IDS) filed on 03/01/2002 and made of record as Paper No. 2. The references cited on the PTOL 1449 form have been considered.

Drawings

4. Figures 17-19 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1 and 5-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The limitation "a predetermined ordinal numbers" and "a predetermined spacing" in claim 1, line 10 and line 11, page 52, are vague and indefinite. It is unclear which ordinal number and spacing are predetermined.

The limitation "a predetermined ordinal numbers" in claim 5, line 7, page 53, is vague and indefinite. It is unclear which ordinal number is predetermined.

The limitation "a predetermined wiring layer" in claim 8, line 6, page 55, is vague and indefinite. It is unclear which wiring layer is predetermined.

The limitation "a predetermined position" in claim 9, line 4 and in claim 10, line 4, pages 56-57, are vague and indefinite. It is unclear which position is predetermined.

Claims 6, 7 and 11 are rejected since they depend on rejected base claims.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

7. Claims 2 and 3 are rejected under 35 U.S.C. 102(e) as being anticipated by Applicants' Admitted Prior Art.

Regarding claim 2, Applicants' Admitted Prior Art., teaches a wiring method for placing interconnection lines in parallel two-dimensionally or three-dimensionally in a layout design of a semiconductor integrated circuit, wherein a signal change frequency at which a signal propagating through an interconnection line changes per unit time is determined for each of the plurality of interconnection line by estimation or simulation, and the plurality of interconnection line are placed based on the signal change frequency so that interconnection line 10 having the high signal change frequency and interconnection line 20 having the low signal change frequency are adjacent to each other (see pages 1-4 and Figs. 17-19).

Regarding claim 3, Applicants' Admitted Prior Art., teaches the plurality of interconnection line are placed based on the signal change frequency, irrespective of an ascending or descending order of the bit (see pages 1-4 and Figs. 17-19).

Allowable Subject Matter

8. Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: Claim 4 is allowable over the prior art of record because none of the prior art whether taken singularly or in combination, especially when these limitations are considered within the specific combination claim, to teach interconnection line having the high signal change frequency are sandwiched by interconnection line having the low signal change frequency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
